

Chabot College: Fall 2025 Student Satisfaction Survey: Students' Responses by SOGI Groups* **

*SOGI = Sexual Orientation and Gender Identity

Students were asked about their access to a variety of resources for meeting educational goals and basic needs in the Fall 2025 Student Satisfaction Survey. Results were disaggregated by SOGI groups and independent samples t-tests were run to ascertain if one sexual orientation group's or gender identity group's access to resources was statistically significantly higher or lower than all other sexual orientations or gender identities, respectively. For understanding results, it is important to note that when questions have a reversed scale, higher agreement with a prompt would represent lower access to resources. For example, for the survey prompt, "Lack of money to pay for housing slows my progress toward my educational goal," higher agreement indicates lower access to resources. Reversed scales have been taken into account for tabulating frequencies.

Some groups of respondents experienced higher access to resources than others. Men, when compared to other gender groups, had 20 instances of disproportionate achievement. On the other hand, both female and transgender groups of respondents experienced disproportionate impact at least 10 times (e.g., regarding experiencing mental health issues or a lack of money for housing). For sexual orientation, heterosexual respondents had the fewest amount of disproportionate impact (1 time) and the most disproportionate achievement (10 times) regarding survey items like being more likely to not have family pressures or physical health issues.

**Percentages for Asexual or Questioning or Queer or Self-Describe are italicized because of relatively small sample sizes/high margins of error (MOEs) (MOEs mostly 4-65%). Caution should be taken when applying sample percentages to the population. Percentages for Non-binary, Transgender, and Gay/Lesbian are in grey and italicized because of small sample sizes/high MOEs (MOEs > 80%). Percentages are representative of the sample, not the population. For most responses, due to MOEs, percentages can be plus or minus: Male: 1-9%, Female: 1-17%, Non-binary: 5-86%, Transgender: 3-86%, Prefer Not to State or Questioning: 5-52%, Asexual or Questioning or Queer or Self-Describe: 4-65%, Bisexual/Pansexual: 3-43%, Gay/Lesbian: 3-86%, Heterosexual: 1-9%, Prefer Not to State: 2-20%.

^RThis question has a reversed scale, meaning *higher* percentages of agreement indicate *lower* access to resources.

⁽⁻⁾This group has statistically ignorantly lower access to resources compared to all other groups.

⁽⁺⁾This group has statistically significantly higher access to resources compared to all other groups.

DEVICES

What type of device do you typically use to access online course material or do college work? (Select what you typically use; Select all that apply.)		Percentage who selected the device										
		Overall (n = 1,382)	Gender Identity					Sexual Orientation
