

Chabot College: Fall 2025 Student Satisfaction Survey: Students' Responses by SOGI Groups*

Students were asked about their satisfaction with various aspects of campus climate, services, and classroom practices in the Fall 2025 Student Satisfaction Survey. Results were disaggregated by sexual orientation and gender identity, and independent samples t-tests were run to ascertain if one sexual orientation group's or gender identity group's satisfaction with campus climate was higher or lower than all other sexual orientation or gender identity, respectively. For understanding results, it is important to note that when questions have a reversed scale, higher agreement with a prompt would represent lower satisfaction with campus climate. For example, for the survey prompt, "Other people make assumptions about my intelligence and abilities because of my gender," higher agreement indicates lower levels of satisfaction with campus climate. Reversed scales have been taken into account for tabulating frequencies.

Prefer not to state and questioning gender identity, transgender, and male respondents were all most likely to experience disproportionate impact (7-8 times) compared to other gender categories. There was less satisfaction with class availability and online schedules, and, for the prefer not to state/questioning group, there was more discrimination experienced. Conversely, female respondents were most likely to experience disproportionate achievement for campus climate (17 times). This group was satisfied with schedules, feeling welcome on campus, and were less likely to experience discrimination.

For sexual orientation, gay/lesbian respondents were highly more likely to experience disproportionate impact (18 times) while heterosexual respondents were more likely to experience disproportionate achievement (9 times). Gay/lesbian respondents reported high amounts of discrimination, in particular. On the other hand, heterosexual students felt welcome on campus and were less likely to report experiencing discrimination.

*Percentages for Asexual or Questioning or Queer or Self-Describe are italicized because of relatively small sample sizes/high margins of error (MOEs) (MOEs mostly 4-65%). Caution should be taken when applying sample percentages to the population. Percentages for Non-binary, Transgender, and Gay/Lesbian are in grey and italicized because of small sample sizes/high MOEs (MOEs > 80%). Percentages are representative of the sample, not the population. For most responses, due to MOEs, percentages can be plus or minus: Male: 1-9%, Female: 1-17%, Non-binary: 5-86%, Transgender: 3-86%, Prefer Not to State or Questioning: 5-52%, Asexual or Questioning or Queer or Self-Describe: 4-65%, Bisexual/Pansexual: 3-43%, Gay/Lesbian: 3-86%, Heterosexual: 1-9%, Prefer Not to State: 2-20%.

^RThis question has a reversed scale, meaning *higher* percentages of agreement indicate *lower* satisfaction with campus climate.

⁽⁻⁾This group has statistically ignorantly lower satisfaction compared to all other groups.

⁽⁺⁾This group has statistically significantly higher satisfaction compared to all other groups.

Groups were combined if they did not have enough students for statistical comparisons in order to report their responses.
